Preface

1

Collocations

1.1 Verb

- 1. We first **decided on** an inventory of semantic relations. [1]
- 2. We **accept as** relation arguments only noun phrases with commonnoun heads. [1]
- 3. This **distinguishes** our task **from** much work in Information Extraction, which tends to focus on specific classes of named entities and on considerably more fine-grained relations than we do. [1]
- 4. We also **impose** a syntactic locality requirement on example candidates, **thus excluding** instances where the relation arguments occur in separate sentential clauses. [1]

1.2 Comparison

- 1. It speaks to the success of the exercise that the participating systems' performance was **generally high**, well over an order of magnitude above random guessing. [1]
- 2. The best relation (presumably the easiest to classify) is CE, **far ahead of** ED and MC. [1]

1.3 Sentence-init

1. It speaks to the success of the exercise that the participating systems' performance was generally high, well over an order of magnitude above random guessing. [1]
